Experience transport (hi)stories

Highlights on water,
on land and in the air

Understand technology!

Visit the Johanneum at the Neumarkt in Dresden to go on an adventure through the history of mobility.

The Transport Museum brings together fascinating objects from the history of mobility on water, in the air, on roads and by rail - all under one roof. Discover interesting and exciting stories about the vehicles - and the people - that move us, and learn about technology at the same time.

1895

Adolf Schöche builds a steam powered car that is today thought to be the oldest Saxon automobile in existence.

Roads

From stately coaches to state-of-the-art electric cars - our exhibition shows you key vehicles from 200 years of road transport history that still fascinate people today. We demonstrate the decisive steps in the development of the cars, motorcycles and bicycles that we know today. See and hear fascinating stories about the people behind these brilliant inventions. And learn about their flashes of inspiration that changed the way people live their lives. Numerous interactive stations allow you to get involved. Climb onto a penny-farthing, for example, or design your own vehicle of the future in our digital Future Lab.

Rail

Our exhibition on railway transport starts with a railway history legend: "Saxonia", the first functioning locomotive in Germany (replica). This forms the start point for your tour through different eras and historic locomotives and railway carriages. Climb up into some of the driver's cabs and experience for yourself how railway history looked, felt and smelled.

1839

The first long-distance railway line in Germany is opened between Leipzig and Dresden. The "Saxonia" was there too.

250

metres was the record distance flown by Otto Lilienthal in his "normal soaring apparatus."

Air

For centuries, mankind dreamt of flying. Brave men and women risked their lives making highly dangerous attempts at flight. Our aviation exhibition casts the spotlight on some of these pioneers, who defied gravity in flying machines, balloons and airships. You'll encounter the Baade 152 in a room all to itself - an aircraft for the East German aircraft industry. So promising at its launch, and yet production of this first German jet-propelled aircraft ceased not long afterwards. But how do aircraft fly at all? Explore the phenomenon of air in our experiment room.

Water

Welcome aboard our permanent exhibition, "Cast off!" Within the spectacular, stylised hull of a ship, travel through 1,000 years of nautical history, both on inland waterways and on the high seas. See and hear how mariners once navigated the oceans, how passengers aboard the great transatlantic steamers dined and how crews had to toil aboard vessels in the East German fishing fleet. And compete head to head with other seafarers in our digital regatta game.

735

kilometres was the length of the route plied by tugboats on the Elbe from Hamburg to Bohemia at the end of the 19th century.

Model railway

Our O-gauge model railway display has more than 200 locomotives, railway carriages, and goods wagons making their way around its tracks. With an area of 325 m², it is amongst the largest of its kind in the world. It also features a built-in narrow-gauge railway that you can operate by hand.

Running time: 15 minutes

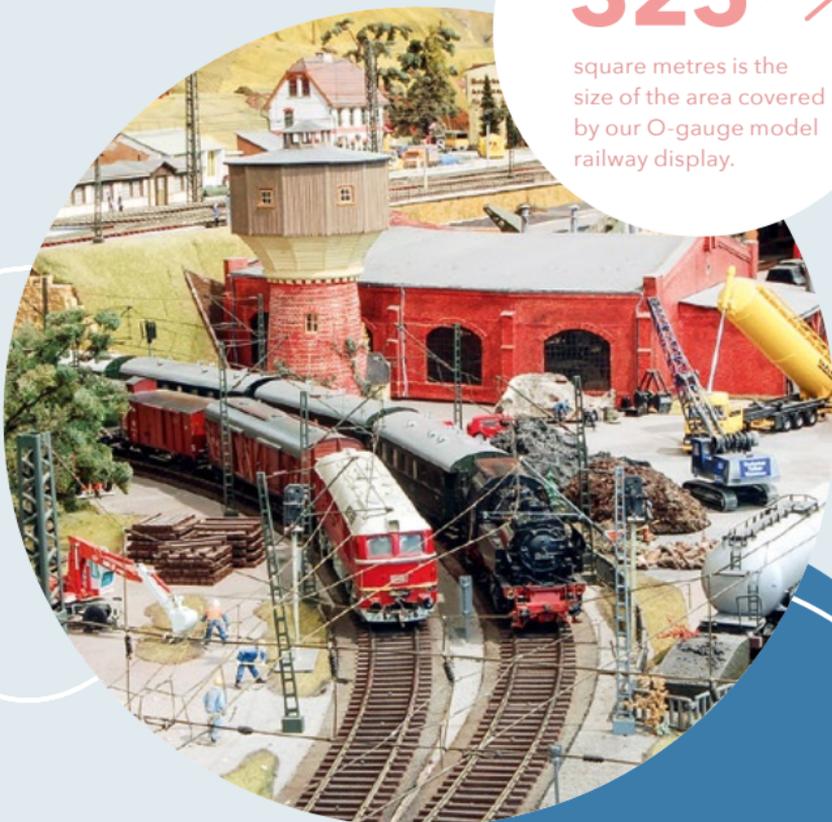

Tuesday/Friday: 11 am

Wednesday/Thursday: 4 pm

Saturday/Sunday: 11 am, 2 pm, 4 pm

325 

square metres is the size of the area covered by our O-gauge model railway display.

Admission prices

Free admission for children aged 5 and under.

Adults: 9 euros

Concessions: 4 euros (children, school pupils, university students, trainees/apprentices, disabled persons, and unemployed persons)

Small family ticket: 9 euros

(1 adult and up to 2 children aged 16 or under)
